

VOICE MARITIME SERVICES

WSN provides Voice over IP in the Maritime Industry through satellite links (Internet), that allow to send and receive calls to/from destinations worldwide.

The parameterization of the system allows for a service 100% tailored to each customer's needs.

Maritime Services: IP Telephony

When a call is generated at the device in the vessel, it is converted to IP and sent through the satellite link towards the HUB station, where it is routed to WSN who will forward the call to the final destination.

It is only necessary to install the VoIP adapter and telephone terminals.
